

VERSA-LINE SERVICES INC. COMPANY PROFILE

Versa-Line Services Inc. focuses on cost effective optimization solutions in the oil and gas industry. We utilize a 2007 hydraulic mast unit intended for both slickline and swabbing operations, with the ability to swab a flowing well downline and work on wells under pressure. This design allows for continued gas production during swabbing operations, and the reduction in released greenhouse gases to the atmosphere. Our dedicated team of professionals is trained in downhole operations including running pulling tools, broaching, fishing, as well as plunger system service and installation. The Rig In process takes just minutes, and is done safely from the ground, and the well can be swabbed to the existing gas line, without requiring a tank. We promote all safe work practices as established in the industry, and strive to work without incident to any personnel, the public, or equipment and to maintain a safe and healthy environment.
